**IMPLEMENTING ARTIFICIAL NEURAL NETWORKS FOR AN
APPLICATION USING PYTHON - REGRESSION**

AIM :

To implementing artificial neural networks for an application in Regression using python.

SOURCE CODE :

```
from sklearn.neural_network import MLPRegressor
from sklearn.model_selection import train_test_split
from sklearn.datasets import make_regression
import numpy as np import matplotlib.pyplot as plt
import seaborn as sns

%matplotlib inline

X, y = make_regression(n_samples=1000, noise=0.05, n_features=100)

X.shape, y.shape = ((1000, 100), (1000,))
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.2, shuffle=True, random_state
=42)
clf = MLPRegressor(max_iter=1000) clf.fit(X_train,
y_train)
print(f"R2 Score for Training Data = {clf.score(X_train, y_train)}") print(f"R2
Score for Test Data = {clf.score(X_test, y_test)}")
```

OUTPUT :

R2 Score for Test Data = 0.9686558466621529

RESULT : Thus the above python code is executed successfully and output is verified.
